

Eco Council Update: Spring 2, 2025

The KS2 Eco Council is excited to relaunch our new and improved recycling programme! Here's how you can get involved:

1. **Paper Recycling:** Paper can now be collected in class in orange bags and the Eco Councillors will be collecting and dumping them into a large orange bin every week. Let's keep those paper products out of the landfill!
2. **Expanded Stationery Recycling:** We're now accepting glue sticks and other plastic stationery items. These will be collected and weighed every half-term to track how much waste we can keep from the landfill!

The KS1 Eco Council has created a wormery in the vegetable beds to help boost plant growth! By introducing worms into the soil, they're improving its quality and providing natural fertilizer. This eco-friendly project not only supports the plants but also teaches students about the importance of healthy soil and sustainable gardening practices. It's a fun and educational way to make the garden thrive!

Together, we can make a big difference in reducing our environmental impact. Let's recycle and help create a more sustainable future!
